The Backup page helps the administrator and users configure *Backup and Restore Jobs* of data stored on the LaCie NAS. A job configured on the Backup page can be:

- One-time and/or manual backups.
- An automated backup that runs daily, weekly, or monthly.
- A restore of all or select files from a backup.

The Backup page features a **Backup & Restore Wizard** to guide you through the setup. Types of backup for public and private folders:

- Local (Direct-attached storage (DAS)):

- Option 1: Share A on a LaCie NAS to an external hard drive (DAS) connected to one of the LaCie NAS's external ports. When you back up files to a DAS, the system keeps up to 10 copies of the backup job. Each iteration of a backup job has a specific date and time giving you the flexibility to restore earlier versions of files. This can be helpful if someone has deleted or made revisions to a document and you wish to recover it or revert to an earlier version.
- Option 2: Connect a DAS to one of your LaCie NAS's ports to back up the DAS's files to a share.
- **Remote Network Backup (Local Network):** A folder on the LaCie NAS to a folder on a second LaCie network attached storage (NAS) on your local network. For example, *Share A* on the LaCie 5big NAS Pro in your office to a LaCie 2big NAS in your colleague's office.
- **Remote Network Backup (Offsite):** A folder on the LaCie NAS to a folder on a second LaCie network attached storage (NAS) outside of your local network. For example, *Share A* on your LaCie 2big NAS in your home office to a LaCie 5big NAS Pro at a colleague's home office.

Backup Examples:

Remote Local Backup: To prevent data loss due to hardware failure, you schedule regular backups of the LaCie 2big NAS to a LaCie 5big NAS Pro. They are both on the same local network. See <u>Set up Remote Backups</u> for details on non-LaCie servers that are rsync-compatible.

Remote Offsite Backup: To prevent data loss due to drive failure, fire, flood, or theft, you wish to back up folders

on a LaCie 5big NAS Pro in your office to a LaCie 5big NAS Pro at another office. You can use the Backup page to set up a remote backup to a LaCie 5big NAS Pro at another location (offsite). See <u>Set up Remote Backups</u> for details on non-LaCie servers that are rsync-compatible.

Restore: Someone in the office accidentally deleted an important spreadsheet from his personal share. Fortunately, the administrator backed up the user's personal share every night onto the DAS connected to the 2big NAS. Use the Backup page to begin a Restore Job to retrieve the missing document. **Important info:** Depending upon the amount of data you intend to back up and the speed of your network, the first backup job may take several hours or, in the case of offsite backups, several days.

SET UP A LOCAL (DAS) BACKUP

Local

- 1. Go to **Dashboard > Backup**.
- 2. Click the **Create job** button.

o Backup					0
Jobs list	NetBackup sei	ver			
					Create job
Name	Mode	Status	Owner	Size Next schedule	d time
		There is	no data to displa	у	

3. Select Local Backup then click Next.

4. Under **Source** on the left, select the *Internal Share(s)* you wish to backup.

Select the source and destina	tion for the	e backup.		
Source		Destination		
 Internal shares Accounts-Payable Accounts-Receivable HR Marketing-Admin Marketing-Creative Music 		 Internal shares External shares LaCie_4big_A (t LaCie_4big_B (t LaCie_Hard_Dr 	usb) usb) ive (usb)	
 ✓ Photos ✓ Public ✓ Video 		Creat	나) e folder	,

5. Under **Destination** on the right, select the *External Share* you wish to use for the backup. LaCie highly recommends that you create a folder inside the share to store the backup. Click on the **CREATE FOLDER** button to add a folder to the share. Click **Next**.

Create folder	×
Create folder in: /LaCie_Hard (usb)/	Drive
5big-Photos	
Cancel A	pply

6. Select a backup type, then click **Next**.

- **Full** means the entire contents of the source folder will be saved each time the backup job runs. This method offers high security but may not be the most efficient use of storage capacity.
- Full (optimized) means that, after the initial full backup, only modified (or missing or new) files are added in subsequent backups. Optimized backups are not available with certain DAS file systems. See the table Supported File Systems for Optimized Backups below.

- 7. Select Manual, Scheduled, or Custom then click Next.
- 8. (Skip this step if you chose *Manual*.) Select the frequency for your backup and the time of day. Click **Next**.

1. Type	2. Configuration	3. Finish	×

Note on Manual Backups: A manual backup must be started by the administrator:

- 1. Navigate to **Dashboard > Backup**.
- 2. Locate the manual backup job you wish to start then click on its grey arrow icon on the far right.

Supported File Systems for Optimized Backups

Operating Systems	Hard Disk File System	Optimized Backup (Incremental)
Linux	ext2, ext3, ext4, and XFS	Yes
Мас	HFS+ Non-Journaled	Yes
Мас	HFS+ Journaled	No
Windows/Mac	FAT32	No
Windows	NTFS	No

SET UP REMOTE BACKUPS

Remote backups will copy data from a share on your LaCie NAS to a share/volume on a second NAS. A second NAS can be another LaCie NAS running LaCie NAS OS (see <u>LaCie Network Storage</u> for details). It can also be a third-party NAS compatible with rsync. The share that you wish to back up on your LaCie NAS is the *Source*. The second NAS is the *Destination* that will store the backup.

Source NAS	Destination NAS	Destination NAS Location	Destination Folder	Type of Remote Backup
LaCie NAS A on the local network	LaCie NAS B or a third-party rsync-compatible NAS (see note on <i>rsync</i> below)	Local network	NetBackup Share (see <u>NetBackup</u> <u>Share</u>)	Local NAS-to-NAS
LaCie NAS A on the local network	LaCie NAS B or a third-party rsync compatible NAS (see note on <i>rsync</i> below)	Network outside of the local network (e.g. a colleague's home or another office)	NetBackup Share (see <u>NetBackup</u> <u>Share</u>)	Offsite NAS-to-NAS

Note on rsync: A complete explanation of *rsync* is beyond the scope of this user manual. For your LaCie NAS, rsync is used to indicate compatibility for data transfers/backups to non-LaCie (third-party) network storage devices. For more information on rsync, see <u>http://en.wikipedia.org/wiki/Rsync</u>.

NetBackup Share

All Remote Backups from your LaCie NAS must be copied to a special share called *NetBackup* on the Destination LaCie NAS. Therefore, you must enable the NetBackup Share on the destination LaCie NAS before setting up a remote backup.

Enable the NetBackup Share

- 1. Launch the Dashboard for the **Destination LaCie NAS**.
- 2. Navigate to **Dashboard > Backup** and select the tab **NetBackup server**.

• Backup	2
Jobs list NetBackup server	
Enable this option to grant a LaCie NAS or a rsync compatible server the right to backup directly to yo 5big Pro NAS*:	ur
NetBackup server	
*All backup data is stored on the share "NetBackup".	

3. Click on **Enable**.

o Backup		0
Jobs list	NetBackup server	
Enable this option 5big Pro NAS*:	to grant a LaCle NAS or a rsync compatible server the	right to backup directly to your
NetBackup se	rver O Enable	
*All backup data is s	ored on the share "NetBackup".	

4. At the prompt, enter and confirm a password then click **Apply**. The password can be different from the password you used for your share(s)/Dashboard. Your NetBackup password will be needed when you set up a Remote Backup.

Choose a password to grant access to your 5big NAS Pro	a LaCie NAS or rsync compatible server
Password	•••••
Confirm your password	•••••
	Cancel Apply

5. With NetBackup enabled, the Dashboard provides a summary of the settings. You may refer to this page if you forget the password or you wish to disable the NetBackup share.

Important info:

- The NetBackup Share can only be accessed by the administrator of the LaCie NAS.
- The administrator can find the NetBackup password if it is forgotten. Go to the NetBackup tab and click on the magnifying glass icon.

Remote Backup: Local Network

Setup

Before following the instructions below, please make certain that:

- The Destination NAS is connected to the same network as your source LaCie NAS and that both devices are powered on.
- The NetBackup Share has been enabled on the Destination LaCie NAS.
 - 1. Go to **Dashboard > Backup**.
 - 2. Click the **Create job** button to launch the Backup & Restore Wizard.

Backup

Password	d ••••••	• 0	

- If the LaCie NAS is listed but cannot be selected, you must enable NetBackup Server. See the instructions above, <u>NetBackup Share</u>.
- If the LaCie NAS does not appear on the list, please make certain it is powered on and out of sleep mode (see <u>Eco Management</u>).
- 8. The Advanced Parameters window lists four options for your backup (Please note that you do not have to select one or more of the Advanced parameters to continue with the backup.):

- Encryption provides secure data transfers over the network. This is ideal for offsite backups.
- Compressing data will optimize data transmission rates. This is ideal for low bandwidth networks.
- Sending modified parts of files is best used with backups that include files larger than 50MB. For example, if you edit a document that has already been backed up, only the edits will be copied during the next backup.
- You can leave data on the Destination NAS even if it is deleted from your LaCie NAS. Please note that this will take up a good amount of storage on your Destination NAS.
- 9. Click Next.
- 10. Set the frequency for the backup.

Note on Manual Backups: A manual backup must be started by the administrator:

1. Go to **Dashboard > Backup**.

2. Locate the manual backup job you wish to start then click on its grey arrow icon on the far right.

Remote Backup: Offsite Network

Setup

Please review the list of prerequisites for an offsite backup before following the instructions:

- The Destination NAS is connected to an offsite network and powered on.
- You must have the **public IP address** for the Destination NAS. You can find the public IP address by clicking <u>here</u> or by accessing your router's management software. When searching for the public IP address, use a computer connected to the same router as the Destination NAS. For further information, review the user manual for the offsite network router or contact your internet service provider. An explanation of IP addressing is available at <u>http://en.wikipedia.org/wiki/IP_address</u>.
- Use your router's management software at the offsite location to open port numbers 22 and 873 to the Destination NAS. (To learn how to open ports on your router, review the user manual for the offsite network router or contact your internet service provider.)
- Enable the NetBackup Share on the Destination NAS (see NetBackup Share).

Offsite Backup Setup

- 1. Go to **Dashboard > Backup**.
- 2. Click the **Create job** button to launch the Backup & Restore Wizard.

Jobs list	NetBackup se
