4.H SHARE LARGE FILES

SHARE LARGE FILES USING LACIE MYNAS

For details on how to set up LaCie MyNAS for your CloudBox, please see [Access your LaCie CloudBox Dashboard Anywhere using LaCie MyNAS](#).

Following the LaCie MyNAS setup, you can share large files within:

- Your LaCie CloudBox Family and administrator folders. You must provide your administrator login and password credentials to trusted family and friends. Please note that your family and friends will have access to all the settings in the Dashboard as well as the administrator's personal folder.
- Your LaCie CloudBox Family folder and a special user folder. You can avoid sharing the administrator password by creating a unique user for family and friends outside the home. See [Access your LaCie CloudBox Dashboard Anywhere using LaCie MyNAS](#) for detailed instructions on how to create a special user and send the link.
