WORKSTATION BACKUP

Your LaCie professional server makes it easy to configure automated backups for workstations on the network. Automated backups run twice a day though you may start a manual backup at any time using the server Dashboard.

CONFIGURING THE WORKSTATION BACKUP

Once a computer has been connected to the LaCie server, you may configure the backup using the Dashboard:

- 1. Launch the Dashboard from a Windows workstation on the same network as your LaCie server. **Start > All Programs > Windows Home Server 2011/Windows Storage Server 2008 R2 > Windows Home Server 2011 Dashboard/Windows Storage Server 2008 R2 Dashboard**
- 2. Select the **Computers and Backup** tab. In this example, the backup has not been configured yet.
